IFP Firmware Upgrades using USB

New firmware release notes Update for IFPxx02-V7 2022-03-28

- Stability updates + Bug Fixes
- KIOSK Mode: Using the remote control, press "menu" ,"7","9","1","3" - the sidebars will toggle on/off
- New Screen Recorder App available in menu:
  Make a video recording of anything on your screen (and your voice if you have a USB connected microphone) with Recorder. It allows you to easily start, pause and stop the recording then save it on the IFP or in the cloud to share it.
- ScreenShare Pro Updates to 9 Screens at once
- New Auto Lock Screen option for securing screen when not in use
  - Option in Settings -> System -> Advanced Settings
  - If a Lock Screen Password has not been configured (or is cleared), the Auto-Lock option is greyed out and not available (option is set as "Never").
  - If a Lock Screen Password is set, the Auto-Lock option is available, and the automatic lock time options are: 5 Minutes / 10 Minutes / 15 Minutes / 20 Minutes / 25 Minutes / 30 Minutes / Never.
  - Once the Lock Screen Password is set, and then the user chooses to clear the password, the automatic lock is greyed out and the option is defined as Never.
  - If Lock Screen Password and Auto Lock time, when the user does not operate the corresponding time, the system automatically locks the screen.
- Option to disable the Ethernet Connection when a user has a device connected through USB-C connecton. Some users may want to use the network from their devce instead of using the pass through capability of the IFP where the Ethernet connection of the IFP would be used directly from the device wheb connected with USB-C. The "Share Network" option is now available in the IFP Settings -> Wireless Network.
- Bytello DMS remote Admin is built right into the main firmware instead of needing to sideload it
